DETAILED ACTION***Reasons for Allowance***

The following is an examiner's statement of reasons for allowance: the claims are allowable over the prior art of record because the prior art fails to show or suggest, either singly or in combination, a vehicle seat with a seat cushion tip-up structure comprising a slide rail means, a base frame means, a seat cushion, a lock mechanism including a lock means provided in the upper rails of the slide rail means and a rotary actuator means which is rotatably disposed above the lower rail means of the slide rail means and operatively connected with the lock means. Furthermore, the vehicle seat also comprises a lock/unlock actuator mechanism for actuating the lock mechanism to cause locking and unlocking of the upper rails to and from the lower rails. The lock/unlock actuator mechanism includes an unlocking lever movably provided under the forward end portion of the seat cushion and a first connecting link, connected to the lever and extending in a longitudinal direction to the seat cushion and being movable along the longitudinal direction. A first rotary arm is rotatably provided between the seat cushion and base means and operatively connects with one end of the first connecting link. A second rotary arm is fixedly connected to the other end of the first rotary arm. A second connecting link is operatively connected between another end of the second rotary arm and the rotary actuator means of the lock mechanism. When the unlocking lever is moved to the unlocking position, the first connecting link, the first rotary arm, the second rotary arm and the second connecting link all move as to rotate the rotary actuator means to move the lock means in an unlocking direction, thus unlocking the upper rail from the lower rail.
